Loftium

About Loftium

Loftium is a fast growing, venture-backed Seattle startup that uses Airbnb to make housing more affordable. We're a small and capable team that's fast-paced, experiment driven, diverse, and places a premium on learning, experimentation, and results. We're also one of the most recognized startups in Seattle (read about us in the New York Times or Geekwire), backed by Silicon Valley investor DFJ to provide innovative new paths to affordable housing.

About the role

We're launching our first ever summer internship! You'll be expected to dive into the operations of an early-stage, venture-backed startup. Each week will be different and you will be pulled into priority experiments and projects as needed. You'll spend 80% of your time helping with company operations, and 20% on a capstone project of your choosing where you create a solution to an operational problem based on your own experience working with Loftium.

Who we're looking for

- Comfortable in an unstructured, fast-paced startup environment
- Great communication skills, both written and verbal
- Tech-savvy and able to quickly pick up new tools
- You're hungry, ambitious, and bought in - you're willing to roll up your sleeves and get things done
